# RENEWABLE ENERGY AT YOUR SERVICE

**The nation's  
first-ever renewable  
energy-powered service station.**

We are excited to have designed and implemented the 100-Kilowatt solar photovoltaic and electric vehicle charging systems at the Preysal Service Station. In addition to the full range of liquid fuels, the station also provides users with 10 compressed natural gas (CNG) filling spots.

At National Energy, we understand the importance of implementing renewable energy technologies on our journey to a low-carbon future.
